Kerala, India

PROFESSIONAL SUMMARY

SOC-focused cybersecurity analyst with hands-on internship experience deploying and managing Wazuh SIEM, engineering custom threat detection rules, and simulating real-world attacks using AtomicRedTeam and MITRE ATT&CK. Built two independent security projects — an enterprise SOC monitoring lab and a continuous vulnerability assessment engine — both fully documented on GitHub. Holds Certified Ethical Hacker (CEH) certification. Seeking an entry-level SOC Analyst or Cybersecurity Specialist role; open to relocation and remote opportunities.

TECHNICAL SKILLS

SIEM & Threat Detection:	Wazuh, Splunk, Sysmon, Log Monitoring & Correlation, MITRE ATT&CK Framework, File Integrity Monitoring, Threat Hunting, Incident Response, Security Alert Triage, EDR/XDR Concepts, Detection Engineering, SOAR Concepts and Security Automation
Penetration Testing & VA:	Nmap, Metasploit, Burp Suite, Hydra, Nessus, OpenVAS, Vulnerability Scanning, VAPT, OWASP Top 10, SQL Injection, Cross-Site Scripting (XSS), Bash Scripting, Web Application Security
Cloud Security:	Microsoft Azure (Cloud Administration & Security), Microsoft Sentinel (Cloud SIEM), Cloud Computing Concepts, Identity & Access Management (IAM)
Network Security:	Wireshark, Firewall Management, TCP/IP, IDS/IPS, VPN, DNS, OSI Model, ARP Spoofing
Systems & Administration:	Windows Server 2016, Active Directory, DNS & DHCP, Ubuntu Linux, Oracle VirtualBox
Threat Intelligence & Other:	OSINT, Reconnaissance, Phishing Simulations, Encryption & Decryption, OpenSCAP, CIS Benchmarks, Incident Reporting

PROFESSIONAL EXPERIENCE

Security Admin Associate L1 (Internship)

Jan 2026 – Mar 2026

Infotact Solutions | Kerala, India

- Deployed and managed Wazuh SIEM Manager with endpoint agents across Linux and Windows servers, enabling centralized enterprise security monitoring
- Implemented File Integrity Monitoring (FIM) policies to detect unauthorized changes in critical system files and security-sensitive directories
- Integrated Sysmon telemetry to enhance endpoint visibility across process creation, persistence mechanisms, and lateral movement indicators
- Configured automated Active Response workflows to dynamically block brute-force attacker IPs using host firewall enforcement
- Performed proactive threat hunting using SIEM correlation rules and endpoint telemetry; mapped findings to MITRE ATT&CK techniques
- Simulated ransomware attack techniques (MITRE T1490 – Shadow Copy Deletion) using AtomicRedTeam to validate detection coverage
- Conducted authenticated and unauthenticated vulnerability assessments using OpenVAS; identified critical CVEs and prioritised remediation
- Executed CIS Benchmark compliance validation using OpenSCAP and produced structured security posture reports

RedTeam Hacker Academy | Kerala, India

- Performed penetration testing and vulnerability assessments in controlled lab environments using Nmap, Metasploit, Burp Suite, and Wireshark
- Conducted network and web application security assessments to identify and document vulnerabilities
- Applied OSINT techniques for reconnaissance and information gathering; documented findings with remediation strategies

PROJECTS

Enterprise SOC Monitoring Lab – Wazuh SIEM, EDR & Threat Simulation

<https://github.com/arjunarju123/Security-Operations-SOC---Enterprise-EDR-Threat-Hunting-Grid>

- Deployed Wazuh SIEM on Kali Linux with Windows Server and Ubuntu agents; integrated Sysmon for process-level endpoint telemetry
- Implemented File Integrity Monitoring (FIM) with real-time alert generation and CVE-based vulnerability detection
- Configured Active Response (IPS) to automatically detect and block SSH brute-force attempts in real time
- Simulated ransomware behaviour (MITRE T1490) using Atomic Red Team; developed custom detection rule mapping to MITRE ATT&CK
- Mapped all alerts to MITRE ATT&CK techniques for structured threat visibility; reduced manual monitoring effort through automated detection rules

VulnVision 360 – Continuous Compliance & Threat Exposure Engine

<https://github.com/arjunarju123/Vulnvision-360>

- Performed asset discovery using aggressive Nmap subnet scanning to build internal attack-surface inventory
- Conducted authenticated and unauthenticated vulnerability assessments using OpenVAS (GVM); identified critical CVEs (CVSS 9.0+)
- Automated compliance validation using OpenSCAP aligned with CIS Benchmarks; generated executive risk reports highlighting Top 10 critical fixes
- Implemented remediation verification workflow through re-scanning to confirm vulnerability closure

Server Administration – Windows Server 2016 Domain Environment

- Built a complete Windows Server 2016 domain environment using Oracle VirtualBox, covering installation, configuration and management of virtual machines.
- Installed and configured Active Directory Domain Services, DNS and DHCP to enable centralized network administration
- Created and joined Windows 10 clients to the domain, implementing user, group and policy management through the server
- Demonstrated end-to-end knowledge of virtualization, server configuration and enterprise network setup

CERTIFICATIONS

Certified Ethical Hacker (CEH) – EC-Council

Advanced Diploma in Cyber Defence – RedTeam Hacker Academy

EDUCATION

BA English Literature

2020 – 2023

University of Calicut | Kerala, India

Transitioned into cybersecurity through structured training, Industry Certifications and hands-on lab practice

AWARDS

Rajya Puraskar – Governor of Kerala | Recognised for excellence across multiple areas of achievement
